Off-Grid Portable Battery Setup

Small steps. Practical preparation. Keep this page where you can find it.

PLAN & CHOOSE YOUR SYSTEM

- ☐ List essential devices and find the watts for each from the label or manual.
- ☐ Add up the watts and note how long each device must run.
- ☐ Pick a capacity tier that covers your list with a little room to spare.
- ☐ Check the unit has the AC, USB-A, USB-C, and DC ports you need.

PREPARE & TEST BEFORE AN OUTAGE

- ☐ If adding solar, match your panel's connector to the station before buying.
- ☐ Charge the unit fully to 100 percent now, not during a storm.
- ☐ Check the charge every few months and top it off so it stays ready.
- ☐ Test your real devices on the station today in daylight with no stress.

SAFETY NOTE Keep the total watts of all connected devices under the unit's limit so you don't overload the power station.
